Training Module
AI Ethical Leader

Training Details

The Responsible Artificial Intelligence (AI) training aims to equip business professionals with the necessary skills to design, implement and manage AI solutions that are responsible, ethical and respectful of societal values.

This 2-hour training is intended for management teams of companies involved in the deployment of AI systems. It is composed of modules presenting the concepts of Responsible AI and using concrete cases to illustrate them. Its objective is to give the keys to engage teams according to a
"Responsible by Design AI" to align organizations around common goals.

The program is as follows:

▪ **Part 1 - Ethics and responsibility in data and AI (60 min):** essential and high-impact concepts. Understanding the issues through concrete examples.

1. **Part 2 - For ethical and responsible AI (40mn):** Raise awareness at all levels and define the key steps and elements of the development of an ethical and responsible AI, taking into account the regulatory framework AI Act, GDPR...
